SUMMARY

A passionate and results-driven MERN Stack Engineer with around 4 years of professional experience in designing, developing, and optimizing web applications. Adept at crafting scalable solutions with modern technologies, delivering clean, maintainable code, and ensuring seamless user experiences. Eager to leverage technical expertise, problem-solving abilities, and a commitment to innovation in a role that fosters growth and impact.

SKILLS

- Frontend:** React.js, Typescript, Redux, Redux Toolkit, React Query, Next.js, Javascript, Tailwind CSS, Bootstrap, HTML/CSS, PWA, React Native
- Backend:** Node.js, Express.js, Fastify, MongoDB, Postgres SQL, MySQL, Containers, Microservices, Docker, AWS, Kafka, Redis, Git, Sequelize

PROFESSIONAL EXPERIENCE

Software Engineer

Mar 2022 - Present

Digital Myth Solutions

At Digital Myth Solutions, contributed to the development of Eagle IOT, a leading vehicle tracking and fleet management system, utilizing GPS and telematics technologies to deliver real-time monitoring, actionable analytics, and performance insights. Enhanced fleet efficiency, safety, and decision-making, setting industry benchmarks with innovative solutions that continue to drive success in fleet management.

- Developed and maintained full-stack web applications with the MERN stack ensuring seamless integration and performance.
- Collaborating with cross-functional teams to gather and analyze requirements for new features.
- Implemented scalable, responsive UIs with React.js, Redux Toolkit, Material UI, and Tailwind CSS to enhance user experience.
- Built and optimized RESTful APIs with Node.js and Fastify for efficient data exchange and performance.
- Conducted code reviews to ensure best practices, maintain quality, and provide constructive feedback for team improvement.
- Integrated real-time data handling with Kafka and Redis to optimize performance and ensure responsiveness.
- Applied security best practices, including data encryption, authentication, and authorization, to safeguard sensitive information.

MERN Stack Developer

Sept 2021 - Mar 2022

Efsol Inc

- Designed and delivered tailored software solutions based on client requirements, ensuring scalability, performance, and satisfaction.
- Debugged, tested, and optimized code to resolve issues, enhance functionality, and improve overall system performance.

PROJECTS

Eagle-IoT Fleet Management

All-in-one platform for fleet, vehicle, and asset tracking

<https://go.eagle-iot.com>

Eagle-IoT is a robust, enterprise-grade platform designed for vehicle tracking, video telematics, fleet operations, and asset management. It empowers transport and logistics companies to streamline operations through real-time monitoring, driver behavior analytics, maintenance alerts, route optimization, and geofencing. The platform is developed using React.js and Redux for a highly interactive and modular frontend, and Node.js with Fastify for a scalable, high-performance backend. It leverages Redis and Kafka for real-time data streaming, ensuring fast and reliable communication between vehicles, devices, and the control center. Designed for extensibility, Eagle-IoT supports custom role-based dashboards, live maps, and dynamic reporting to meet the demands of modern fleet operations.

Eagle-IoT Mobile App (Android, iOS)

Companion mobile app for the Eagle-IoT platform

[View on Play Store](#)

Extends the functionality of Eagle-IoT to mobile users, allowing real-time access to vehicle tracking, alerts, analytics, and more. Built with React Native, Redux Toolkit, Typescript, this cross-platform app ensures fleet managers and supervisors can stay updated on-the-go.

Driver App – Eagle-IoT

Driver-side application for Eagle-IoT Fleet Management

[View on Play Store](#)

Integrated with the Eagle-IoT platform, this app is purpose-built for drivers to manage assigned assets, view daily tasks, follow optimized routes, and receive real-time notifications. It simplifies driver-to-dispatch communication and ensures compliance tracking. Developed using React Native, TypeScript, Redux Toolkit, and a Node.js backend.

Smartsense Eagle-IoT (Web)

Warehouse sensor and layout management platform

<https://smart-sense.eagle-iot.com/>

Part of the Eagle-IoT ecosystem, Smart Sense enables admins to upload building floor plans and place IoT sensors directly onto digital layouts, aligning physical warehouse structures with real-time digital monitoring. Built with React.js, Material UI, TailwindCSS, Redux Toolkit, TypeScript, Node.js (Fastify), and PostgreSQL.

Smartsense Mobile App (Android, iOS)

Mobile companion to Smart Sense for warehouse operations

[View on Play Store](#)

This mobile version offers users the ability to view sensor placements, monitor real-time statuses, and get alerts on-the-go. Built with React Native, Redux Toolkit, and Node.js, ensuring performance and responsiveness across platforms.

AR Home Services – Web & Mobile Apps

All-in-one platform for doorstep services like food, groceries, and household tasks

<https://arhomeservices.com> [View on Play Store](#)

AR Home Services is a comprehensive platform offering a wide range of on-demand home services, including food delivery, groceries, and household maintenance. The web app is built with Next.js and Redux for a fast, interactive frontend, and powered by a Node.js backend using Fastify for high performance. A React Native mobile app ensures seamless access across Android and iOS devices, delivering a unified experience to users on the go.

Antique Watches Store

E-commerce platform for premium vintage timepieces

www.antiquewatches.shop/

A curated online store offering authenticated antique and vintage watches from globally recognized brands such as Rolex, Omega, and Patek Philippe. The platform caters to collectors and first-time buyers alike, with detailed product listings, high-resolution imagery, and a refined shopping experience.

Built using Next.js, Redux, TailwindCSS, and MySQL, the site features advanced product filtering, a responsive design, and a clean, elegant UI tailored to highlight the craftsmanship and heritage of each timepiece.

ApnaBike – Bike Rental Platform

Bike rental platform for urban commuters and travelers

<https://apnabike-front.vercel.app/>

ApnaBike offers an easy and affordable way to rent motorcycles via a web-based interface. Features include real-time availability, secure bookings, and Stripe-powered payments.

Built using React.js, Express, MySQL, Sequelize, SASS, and Bootstrap.

EDUCATION

BS in Computer Science

University Of Sargodha

2017- 2021
